

How To Disable Windows 10 Auto Login

There are up to three procedures used to disable Windows 10 Auto Login.

STEP 1

1. From the Windows search window, find and run **netplwiz**.
2. Make sure **Users must enter a username and password to use this computer** is checked.

Here is a link to this procedure:

How To Disable Windows 10 Auto Login STEP 2

1. Find the computer in AD and remove it from the AUTOLOGIN group.
2. Run “gpupdate /force” on the client computer.

STEP 3

1. Open Registry Editor by running regedit command.
2. Go to **HKEY_LOCAL_MACHINE\SOFTWARE\Microsoft\Windows NT\CurrentVersion\Winlogon.**
3. Set AutoAdminLogon registry string (REG_SZ) to 0.
4. Close Registry Editor and reboot.
