

How To Use Epson iProjection To Connect Projectors To A Computer

Initial Setup

Download and install the appropriate **Epson iProjection** app from the following website. It will be at the bottom of the window in the middle.

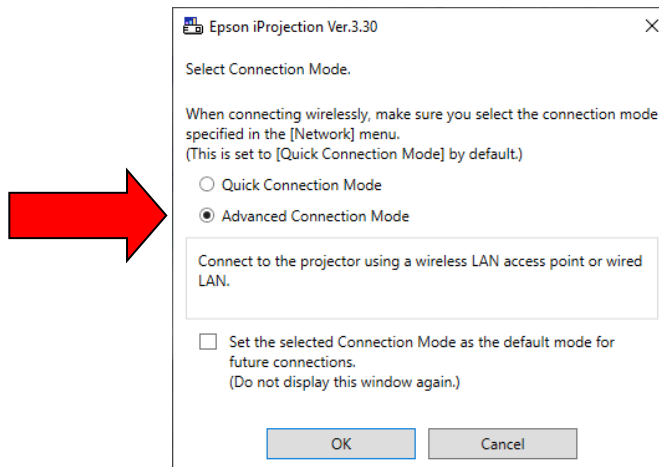

<https://epson.com/wireless-projector-app>

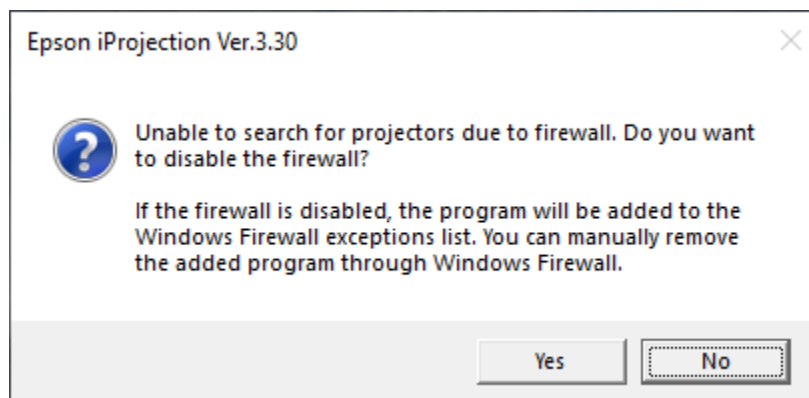

How To Use Epson iProjection To Connect Projectors To A Computer

Using the app

Start the program. When you see the window below, make sure **Advanced Connection Mode** is selected, then click the **OK** button.

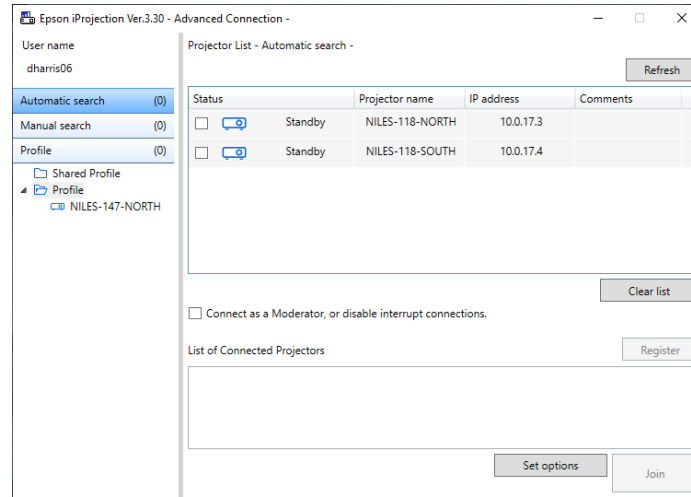

Click **NO** on the following window.

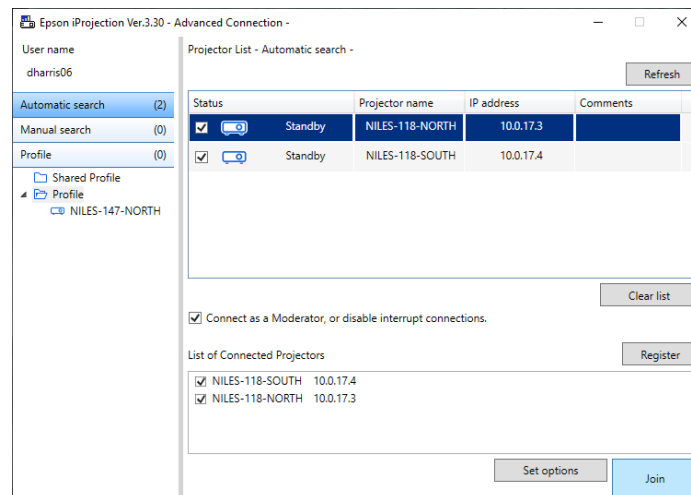

How To Use

Epson iProjection To Connect Projectors To A Computer

At this window, you should see your projector or projectors in the **Projector List**. If you do not, make sure the projector(s) are turned on.

When you see them, click on the boxes under **Status** next to the projector(s) you want to use, then click on the **Join** button at the bottom.

You will see the small box below at the bottom right-hand side of your screen. You are now connected to the projectors.

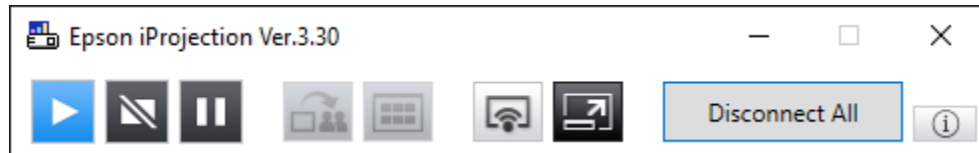

If you do not see your computer screen on the projector(s), use the Epson Remote and click the **Source Search** button one time. The projector will do a search and then display the computer screen.

Disconnecting When You Are Finished

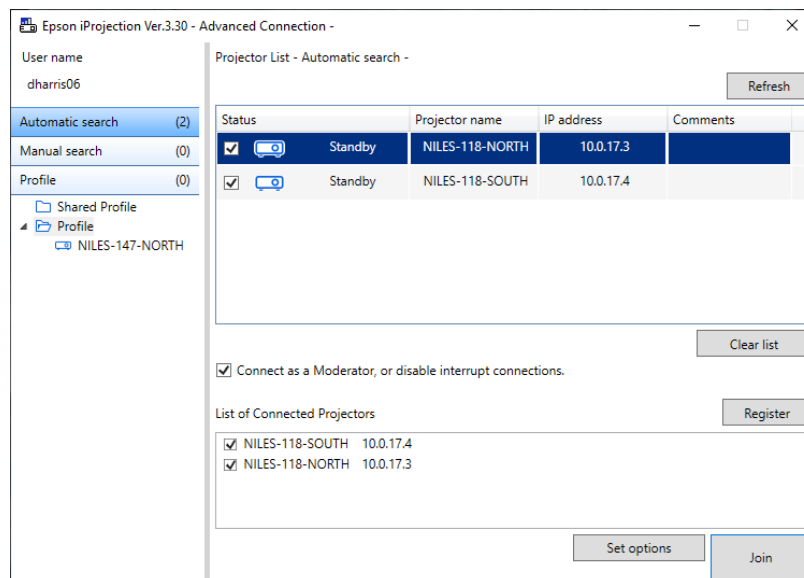

When you are finished, click on the **Disconnect All** button at the bottom right.

Click the **Yes** button at the next screen.

Close the window below, and turn off the projector(s).

You are finished.
